Digest

U.S. Agricultural Exports Slightly Higher in Early FY 1990 (see p. 2) U.S. agricultural exports rose slightly during the first 5 months of FY 1990 (October 1989-February 1990), climbing 4 percent to \$18 billion. Corn exports increased \$650 million and cotton exports rose \$550 million. A change in the method used for compiling U.S. data raised the value of exports to Canada by about \$300 million. Reported U.S. exports of fruits, vegetables, and meats, including exports to Canada and elsewhere, rose \$350 million. These commodities were particularly affected by changes in the Canadian data. On the other hand, U.S. exports of some products fell during the first 5 months of FY 1990, including wheat, soybeans, soybean meal, and animal products.

Exports Make Up Larger Share of Farm Output in FY 1989 (see p. 6) More than 18 percent of the value of U.S. agricultural production was exported in FY 1989, up from 16 percent the previous year and the highest total in 5 years. The 1988 drought and expanded foreign demand for feed grains in 1989 spurred the increased export share. The 18 percent of value being exported amounted to output from 2 of 5 acres in FY 1989, equaling the record set in FY 1984.

California Tops All States in 1989 Agricultural Exports (see p. 11) For the fifth consecutive year, California led all States in exports of agricultural commodities. Exports of fruits, vegetables, nuts, cotton, wheat, rice, and seeds accounted for most of its \$3.6 billion total. This value estimate places California 19th when ranked among the nations that export agricultural commodities.

U.S. Agricultural Exports Slightly Higher in Early FY 1990

U.S. agricultural exports rose slightly during the first 5 months of FY 1990 (October 1989-February 1990), climbing 4 percent to \$18 billion. Corn exports increased \$650 million and cotton exports rose \$550 million. A change in the method used for compiling U.S. data raised the value of exports to Canada by about \$300 million. Reported U.S. exports of fruits, vegetables, and meats, including exports to Canada and elsewhere, rose \$350 million, mainly because of the changes in U.S. reporting procedures. U.S. exports of some products, however, fell during the first 5 months of FY 1990, including wheat, soybeans, soybean meal, and animal products.

U.S. corn exports rose nearly 40 percent to 29 million tons, but lower prices meant export value increased just 25 percent to \$3.3 billion. Reduced competition from China helped exports to Japan rise by nearly 1 million tons, and Korea and Taiwan each increased their purchases by more than 1 million tons. Sales to China climbed from zero during the first 5 months of FY 1989 to almost 400,000 tons during early FY 1990.

The Soviet Union, however, accounted for much of the strength in corn exports. Shipments climbed 2.6 million tons to more than 10 million tons. Relative grain prices favoring coarse grains rather than wheat help explain increased Soviet purchases from the United States. Also helping were continued strong Soviet emphasis on livestock production and an increase in the U.S. share of Soviet purchases.

Cotton exports also benefited from an increase in the U.S. share of world trade. World cotton trade has remained relatively strong, continuing at more than a 25-million-bale annual rate, but Pakistan and China each saw their exports fall by about half. The United States increased its shipments to virtually every customer and prices were higher as well.

The value of reported exports to Canada climbed about 50 percent to \$1.2 billion partly due to a change in reporting procedures. Since Canada is the second largest customer for U.S. beef and veal and the largest customer for fresh fruits and vegetables, increased shipments to Canada raised the reported total export value of these commodities as well as the quantity of exports to Canada.

U.S. Underreporting Corrected

About \$1 billion per year of U.S. agricultural exports to Canada went unrecorded during most of the 1980's. This discrepancy was officially acknowledged by both governments after Canada's import statistics showed about \$3 billion of U.S. agricultural products entering annually rather than the \$2 billion reported by the United States. The differences between border controls on incoming and outgoing traffic explain much of the discrepancy. A substantial portion of U.S. agricultural exports to Canada are consumer goods transported by truck. Exiting the United States, these trucks may leave no official record, as is the case with other highway traffic. However, entering traffic is more vigilantly controlled in both countries, explaining the higher count in Canada. When merchandise enters, tariffs and other regulations apply in most cases and all goods are recorded. But, with no export taxes and minimal U.S. restrictions for sending goods out of the country, monitoring exports has been a lower priority.

Canadian officials record all goods entering Canada as imports, including the shipments excluded from U.S. statistics. Canada has annually reported as much as \$16 billion more in imports of all goods from the United States than shown in U.S. export figures, and the difference was trending upward. In response to this persistent underreporting, the official U.S. export information on Canada will be based on Canada's import statistics as of January 1990.

Recorded exports of some products rose substantially more than others during the first 5 months of FY 1990, helping indicate which products were previously most affected by underreporting. The largest gains came in meats, cattle hides, mink pelts, fruit juices, wines, "other" noncitrus fruits, "other" fresh vegetables, frozen vegetables, pulses, oilseeds, and "other" vegetable oils. Two generalizations are notable: (1) these are products traded at a much more advanced stage in the processing/distribution chain than most U.S. agricultural exports, and (2) the residual or "other" segment showed the strongest growth in most commodity groups. Products like "other citrus" tend to be exported in much smaller quantities than such major products as oranges and grapefruits. "Other" goods are composed of a number of still smaller volume commodities. Thus, judging by this pattern in export growth, past undercounting most obviously affected items purchased only sporadically or in small lots.

High-value product (HVP) exports to Canada rose particularly strongly with the change in data collection.

HVP's constitute a much larger share of U.S. exports to Canada than average, and the circumstances that led to the undercounting of exports seem to apply particularly to trade in HVP's.

Wheat and Oilseeds Each \$400 Million Lower

Led by wheat and soybeans, exports fell for a number of products, offsetting much of the export gains cited above. The value of U.S. oilseed and product exports fell \$400 million to \$3.2 billion, as prices fell for oilseed meals, seed, and oil, and the volume of meal and oil shrank. Falling soybean meal prices failed to deter an 11-percent loss in soybean meal volume as European importers purchased soybeans instead. Lower soybean prices directly accounted for some of the 1-million-ton increase in soybean exports, but some of this gain also has come at the expense of meal exports. Soybean meal manufacturing has been more profitable for European crushers during FY 1990, increasing European demand for soybean imports but increasing

Europe's supply of domestically manufactured soybean meal.

Record South American soybean production also probably helped reduce U.S. soybean meal exports. Argentina and Brazil use differential export taxes to ensure that most of their soybeans are crushed into meal before export. In recent years, South America's meal exports have been more than double its exports of raw beans. South American soybean production ranged about 2 million tons higher in FY 1990 than in 1989, and beginning stocks also hit a record and exceeded U.S. stocks.

U.S. wheat exports fell 3.4 million tons, worth \$470 million, during FY 1990's first 5 months. Exports fell largely because China reduced its purchases by nearly 2 million tons. Exports were also lower to India, Morocco, Pakistan, Bangladesh, Egypt, and the Philippines. Italy and several Middle Eastern countries increased their imports from the United States. (Stephen MacDonald, Commodity and Trade Analysis Branch)

Exports Make Up Larger Share of Farm Output in FY 1989

More than 18 percent of the value of U.S. agricultural production was exported in FY 1989, up from 16 percent the previous year and the highest total in 5 years. These estimates are based on the farm value of U.S. exports divided by gross cash income. The 1988 drought and expanded foreign demand for feed grains in 1989 spurred the increased export share. Output from 2 of 5 acres was exported in FY 1989, equaling the record set in FY 1984.

Wheat Share Continues to Rise

Drought significantly reduced the U.S. wheat crop in 1988. However, because there are two seasons, winter and spring, for producing wheat, some wheat producers earned less than others. Table 6 shows the changes in wheat production from 1987 to 1988 and how severely drought reduced spring wheat output. Hard red spring wheat production fell to its lowest level since 1966. The table also shows the effect on exports. China was back in the U.S. wheat market, raising soft red winter wheat exports to their highest level since 1982-83.

Table 6—U.S. wheat production and exports, by class, 1987-88

1987	27.9	22.3	162.0	13.8
1988	35.4	28.3	171.6	16.5
1989	39.7	31.8	174.0	18.3

¹ Port value x 0.80 = farm value.

² Income figures are on a calendar year basis.

Seventy-nine percent of U.S. wheat production was exported in 1988-89, up from 73 percent in 1987-88, and the highest share since 89 percent was exported in 1972-73, the year of the first major Soviet grain purchase. In 1972, U.S. production had fallen 4 percent while exports had doubled. In 1988, production fell 14 percent while exports fell 7 percent.

Corn and Sorghum Shares Climb; Soybeans Fall

Not since the Payment-in-Kind (PIK) program reductions in 1983/84 has U.S. feed grain output dropped as sharply as in 1988. Corn fell by 31 percent and sorghum by 21 percent. Yet, foreign demand for feed grains reached its highest point in 8 years in 1988. The Soviet Union bought a record 15.6 million tons of corn, while Japan, Mexico, and Venezuela pushed U.S. sorghum sales to a near-record 8.1 million tons. With production falling and exports rising, the exported share of both corn and sorghum production climbed. Exports constituted 41 percent of 1988 corn production, and sorghum exports hit a record 55 percent.

Foreign and domestic demand reduced stocks for both corn and sorghum, and export unit values rose \$22 a ton for corn and \$20 for sorghum as a result.

While most grain markets tightened in 1988/89, the soybean market loosened up. The 20-percent drop in U.S. soybean production fell far short of the decline in foreign demand for soybeans and products. In 1988/89, the short U.S. crop and increased competition from Brazil and Argentina reduced the share of U.S. soybean output that was exported to 47 percent from 55 percent the year before.

Tallow Numbers Revised

Historical production data for inedible tallow have been substantially revised to exclude edible tallow and animal grease. ERS analysts discovered that the production series that had been used included the two commodities. This change reduced the U.S. production figure by approximately 800,000 tons per year. Production in 1987 was revised to 1.9 million tons from 2.7 million tons, raising the 1987/88 export share from 43 to 64 percent. (Stephen R. Milmoe, Commodity and Trade Analysis Branch)

California Tops All States in 1989 Agricultural Exports

For the fifth consecutive year, California led all States in exports of agricultural commodities. California placed among the top 10 States in 12 of the 16 commodities shown in table 14 during FY 1989. These estimates are based on a State's share of production. California was the leading State by a wide margin in four of the categories (fruits, nuts, vegetables, and seeds). For those four commodities, California's shipments exceeded the second largest exporter's by a combined \$1.8 billion. California placed second in cotton and dairy exports.

In 1989, six States exported at least \$2 billion of farm products, and six others exported at least \$1 billion. Another 14 States exported at least \$500 million. In all, 34 States exported a minimum of \$200 million of agricultural products. Nebraska showed the largest year-to-year increase because it was able to maintain its feed grain production while other States did not. Nebraska benefited from increased foreign demand and a 22-percent increase in average prices. Kansas was the second largest beneficiary, exporting more sorghum, wheat, and corn.

Wheat Exports and the 1988 Drought

The 1988 drought hit grain-producing States especially hard in FY 1989. Wheat exports jumped by 35 percent, or \$1.6 billion, despite a 7-percent decline in

export volume. Not all wheat-producing States, however, shared in this revenue gain (table 10). Soft red winter wheat producers were the biggest gainers followed by States producing white wheat, hard red spring wheat, and hard red winter. Durum-producing States experienced a decline in total export revenue. Washington State increased its white wheat exports from \$272 million to \$550 million. That increase was the major reason it moved into the top 10 States for the first time.

Export Shifts in the 1980's

The most significant change in the 1980's was the emergence of California as the largest exporting State. Three States, Illinois, Iowa, and California, were number one during the decade. Throughout the 1980's, the same eight States, Illinois, Iowa, California, Texas, Kansas, Nebraska, Minnesota, and Indiana, have held the top eight positions.

As foreign demand for U.S. commodities changed, so did State rankings. For example, in the early 1980's (and again in the late 1980's) when China was buying substantial amounts of U.S. wheat, it purchased primarily soft red winter wheat from the Corn Belt and the Southeastern States. Table 11 shows the amount of fluctuation for each of the different classes of wheat. Overall wheat exports have less volatility than most of the individual classes of wheat because of substitution among the different classes.

**Table 10—Percentage change in U.S. wheat export value from the previous year,
by major State, FY 1989**

Type of wheat	Change	Major producing States and export values					
	<u>Percent</u>	<u>-----Million dollars-----</u>					
Hard red winter	6	Kan.	1,027	Okla.	549	Texas	268
Hard red spring	22	N.D.	351	Minn.	246	Mont.	90
Soft red winter	196	Mo.	246	Ill.	218	Ark.	187
White	-89	Wash.	550	Ore.	268	Idaho	241
Durum	-54	N.D.	80	Calif.	14	Ariz.	11

Since 1984, exports of live animals and meat have grown \$1.6 billion (135 percent) to \$2.9 billion. Beef exports, particularly to Japan, accounted for two-thirds of this increase. Major beneficiaries have been Kansas (\$280 million), Nebraska (\$263 million), Texas (\$226 million), Iowa (\$116 million), and Colorado (\$95 million).

Before the 1980's, grains, oilseeds, cotton, and tobacco were the mainstays of U.S. agricultural ex-

ports. This changed significantly during the 1980's, and California became the top export State in 1985 on the strength of such "nontraditional" exports as fruits, nuts, and vegetables. U.S. earnings on these exports have risen from \$2.6 billion to \$4 billion, largely due to increased foreign demand and vigorous promotion of California products overseas.

Of Nations and States

According to the latest trade data from the Food and Agriculture Organization of the United Nations (FAO), 43 countries (including the United States) exported at least \$1 billion of agricultural commodities in 1988. Excluding the United States, the top five exporting countries were France (\$27.3 billion), the Netherlands (\$25.0 billion), West Germany (\$16.9 billion), Australia (\$10.4 billion), and the United Kingdom (\$10.3 billion). Twelve U.S. States would rank among the top 42 countries. California ranks 19th, between New Zealand and Indonesia, when placed among countries which export agricultural commodities.

With the relatively high degree of approximation involved in estimating export shares by State, rankings should be used with discretion. In 1989, for example, the difference between Nebraska and Iowa, Texas and Illinois, and Washington and Missouri was not significant. (Stephen R. Milmoie, Commodity and Trade Analysis Branch)

Table 11—Variability in U.S. wheat exports, by class, 1979/80-1988/89

Type of wheat	Average	Standard deviation	Coefficient of variation
---Million bushels---			Average standard deviation
Hard red winter	612	143	0.234
Hard red spring	189	25	.132
Soft red winter	220	100	.453
White	197	37	.189
Durum	57	16	.288
Total	1,276	246	.193

N.A. = Not available. 1/ Mainly miscellaneous animal products, coffee, tea, spices, sugar, and fur skins (except mink skins).

INDEX OF APPENDIX TABLES

Exports

Table		Page
A-1	U.S. agricultural exports: Quantity and value by commodity	A-2
A-2	U.S. agricultural exports: Quantity, value, and unit value by commodity and country, October-February 1988/89 and 1989/90, and February 1990	A-5
A-3	U.S. wheat exports: Quantity (1,000 MT) by destination, October-February 1988/89 and 1989/90	A-65
A-4	U.S. coarse grain exports: Quantity (1,000 MT) by destination, October-February 1988/89 and 1989/90	A-66
A-5	U.S. soybean exports: Quantity (1,000 MT) by destination, October-February 1988/89 and 1989/90	A-67
A-6	U.S. agricultural exports: Value (1,000 dol.) by destination, October-February 1988/89 and 1989/90	A-68

Imports

B-1	U.S. agricultural imports: Value (1,000 dol.) by country of origin, October-February 1988/89 and 1989/90, and February 1989 and 1990	B-1
B-2	U.S. agricultural imports: Quantity and value by commodity	B-2
B-3	U.S. agricultural imports: Quantity, value, and unit value by commodity and country, October-February 1988/89 and 1989/90, and February 1990	B-4

Prices

C-1	Foreign currency units per U.S. dollar	C-1
C-2	Domestic and foreign wheat prices	C-2
C-3	Corn, sorghum, rice, and cotton prices	C-2
C-4	U.S. and northern European soybean and product prices	C-3
C-5	U.S. import prices	C-3

Are we approaching a world food crisis?

That's the question addressed in a new report from the Economic Research Service. The question is raised by a confusing array of facts. Most of the world's good farmland is already in production, nearly all the available irrigation water has been tapped, and groundwater supplies are shrinking. **If world population stabilizes sometime around the end of the next century (as currently projected), the world should have enough nonrenewable resources, such as land, water, and energy, to feed a growing population at a gradually improving standard of living.** But these resources are unevenly distributed, resulting in often prolonged, though localized, shortages. And although world food production per capita continues to increase, it's doing so at a slower rate.

Order your copy of this vital report now. With it you can sort out and put into perspective the recent spate of "no-hope, new-hope" news articles on our world's potential to feed itself.

Read the recent special issue of World Agriculture, an ERS publication...In a scholarly 75 pages by its own specialists, it tackles such subjects as "Famines Past and Famine's Future" ... "Environmental Degradation of Agriculture" ... "Climate Change and Agriculture" ... "Short-Term World Food Security" ... "Technology: Are We Running Out of Steam?" and more.

—From *USDA Executive Notes*, Aug. 1989

This report costs \$5.50 domestic and \$7.00 foreign (includes Canada). To order your copy, call toll-free, 1-800-999-6779, and ask for *World Agriculture, SPECIAL ISSUE*, WAS-55. Or send check or money order to ERS-NASS, P.O. Box 1608, Rockville, MD 20849-1608. Your order will be sent by first-class mail.
